2. **b)** First Conditional
3. **c)** If I had money, I would start a startup.
4. **b)** Investment
5. **a)** Understand customer needs

Short Text: "My Future Startup"

My future startup will be called StarUP, a digital platform designed to validate software solutions for early-stage companies. Many startups fail because they build products the market does not want. If companies test new software solutions, they reduce operational costs. If we launch our platform next month, we will attract dozens of innovative startups and tech investors. If I had more capital, I would implement advanced AI tools to match companies and startups faster. Our goal is to transform unverified sales promises into real, audited business results.
